

Diagnostic Lab Codes — Non-Covered Under Plan

Preventive vs. diagnostic determination for submitted laboratory CPT codes. Denied codes are classified as diagnostic testing and fall outside routine preventive screening.

Reference note. This list documents determinations already applied to the submitted codes below. It is not a standing formulary. Always confirm coverage against the member's active plan and the current Sedera Member Guidelines before communicating any determination.

Non-Covered — Diagnostic Labs (Denied)

CPT	Laboratory Test	Determination	Reason
82306	25-Hydroxy Vitamin D	Not Covered	Diagnostic test — not a routine preventive screening lab
84481	Free T3 (Triiodothyronine, Free)	Not Covered	Diagnostic test — not a routine preventive screening lab
82728	Ferritin	Not Covered	Diagnostic test — not a routine preventive screening lab
82746	Folate	Not Covered	Diagnostic test — not a routine preventive screening lab
82607	Vitamin B12 (Cyanocobalamin)	Not Covered	Diagnostic test — not a routine preventive screening lab
84439	Free T4 (Thyroxine, Free)	Not Covered	Diagnostic test — not a routine preventive screening lab
83550	Iron Binding Capacity (TIBC)	Not Covered	Diagnostic test — not a routine preventive screening lab
83540	Serum Iron	Not Covered	Diagnostic test — not a routine preventive screening lab
83735	Magnesium	Not Covered	Diagnostic test — not a routine preventive screening lab
84450	AST (SGOT)	Not Covered	Diagnostic test — not a routine preventive screening lab
82977	GGT (Gamma-Glutamyl Transferase)	Not Covered	Diagnostic test — not a routine preventive screening lab

11 codes denied. All classified as diagnostic laboratory tests rather than routine preventive screening.

Covered — Preventive (For Reference)

CPT	Service / Panel	Status
99396	Preventive Medicine Visit, Established Patient (40–64 yrs)	Covered
80050	General Health Panel	Covered
80061	Lipid Panel	Covered
83036	Hemoglobin A1C	Covered
36415	Venipuncture (Routine Specimen Collection)	Covered

Determination Basis

Codes are shareable when billed as routine preventive screening. The denied codes above were submitted as individual diagnostic assays (vitamin, thyroid, iron studies, and liver enzymes) that are evaluated as diagnostic testing under the plan's preventive-care benefit and therefore fall outside routine preventive screening. Reclassification may be possible if a covered diagnosis or medical-necessity documentation is on file; route such cases to the Needs Coordinator for review.
